

Mix of Standard Length Specification (Export)

Indicative Length Supply

Abodo’s Vulcan timber is produced from natural wood and therefore has variability in standard length supplied. The plantation grown radiata pine logs used as base material are supplied from the forest in a mix of standard lengths, ranging from 2.7m - 4.8m. A portion of lengths less than 2.7m are produced when the timber is cut back during sawmilling. The length mix is determined by standard recovery practices from the mill. This document is designed to give an indication of what lengths will be delivered when an order is made with Abodo.

The Mix of Standard Length specification allows for supply in lengths from 1.2m – 4.8m. Generally composed of up-to 10% less than 2.7m, and two or more longer standard lengths. Longer lengths are heavy 4.2m or 4.8m. Lengths less than 2.7m will be supplied either as one fixed length or multiple lengths.

Final length specification will be determined based on the current availability at time of order.

You will receive up to 10% of your order in these lengths. Either as one length or multiple lengths.				The majority of your order will be made up of two or more of the below standard lengths, heavy in 4.2m or 4.8m.							5.1m and 5.4m are less likely to be in your order.	
1.2m	1.8m	2.1m	2.4m	2.7m	3.0m	3.6m	3.9m	4.2m	4.5m	4.8m	5.1m	5.4m
