

End Caps

End Caps on Vulcan Screening

Overview

Abodo End Caps are designed for the long-term protection of exterior timber end grains. The inverted micro-tooth design results in a clean aesthetic with no visible fasteners. Made from durable stainless steel and supplied as standard with an attractive rubbed finish.

Typical uses

Exterior screening, fencing, posts, beams.

Features

- Maintenance free protection of timber end grains.
- Marine grade stainless steel.
- Self-holding design for easy installation.
- No visible fixings.
- Available in powder coated finish in a range of colours.

Wear suitable protective clothing, gloves and eye protection.

End Caps

Product specifications

Preparation

- Existing coatings must be removed from end grain to expose raw timber surface.
- Thoroughly sand timber end grain with 180 grit sandpaper.
- Clean any dirt or dust from the timber.
- Ensure timber is dry <16% moisture content.

Application

1. Abrade underside of cap with polyester scouring pad.
2. Clean with Sikaflex Activator 205, allow to dry 10 mins.
3. Ensure timber end grain is clean, dry and free of coatings.
4. Apply Sikaflex 11FC to end grain of timber in a continuous bead around the perimeter of the end section.
5. Place End Cap onto the end of the timber and gently tap it into place using a rubber mallet. Be careful not to damage the surface finish.
