# **ABODO**

## **Vulcan Screening**

Overview			ied New Zealand plantatic				
	engineered with a vertic	al grain construction for s	uperior weathering charac	CTERISTICS.			
	enhanced stability, redu	The thermal modification process combined with lamination means Vulcan Screening has enhanced stability, reduced resin content, is a beautiful homogenous brown colour, and is naturally durable so does not require any chemical preservatives.					
	An excellent choice for appearance grade applications such as joinery, pergola, screening, facade fins and ballustrading in-fill.						
Wood species:	Thermally Modified Rad	iata Pine (Pinus Radiata).					
Lengths:	Mixed length – Supplied	as packets with 1.8m and	longer, or fixed lengths at	Abodo's option.

## **(a ABODO**

### **Vulcan Screening**

Colours:

Colours presented are in Protector – Water Borne and are indicative only. Colour may change/fade as a part of the natural weathering process.

Vulcan White

Vulcan Sioo:x (Weathered 1 yr)

Name:	Abodo Vulcan Screening.
Quality:	<b>Select Grade</b> /Front face and edges virtually free of any defects but with one edge knot and one small face defect allowed per piece in 20% of boards only. Back side with some defects allowed.
Substrate colour:	Chocolate Brown. (Timber will weather to grey unless a pigmented coating is applied and maintained).
Finish:	Bandsawn faces as standard (smooth dressed subject to confirmation by Abodo). Bandsawn dimension may vary up to +/-2mm (some variation in the visual appearance of the bandsawn finish can be expected).
Durability:	Thermally modified – INTENZ Thermowood 230 degrees schedule. No chemical preservatives used. Field tested at SCION, Rotorua. Suitable for uses described in NZS3602:2003 Table 2A 'Requirements for wood-based building to achieve a 15 year durability performance Members exposed to exterior weather conditions and dampness'. Durability Class 1 (EN350-1), Class 2 above ground (AS5604).
Insect attack:	Thermally modified pine is resistant to most wood boring insects but is not always resistant to termites. Preservative treatment is required for termite zones.
Intended use:	Intended for above ground use in residential and light commercial buildings. Not suitable for use in load bearing structural applications or as a primary safety barrier in exterior situations.
Serviceable life:	30 years or more when maintained according to manufacturer's recommendations.
Warranty:	15 years against fungal decay (subject to terms and conditions).
Moisture content:	Approx. 7% MC (+/-2%) at time of dispatch.
Construction:	Laminated with vertical grain orientation.
Glue:	New generation polyurethane adhesive- VOC, solvent and formaldehyde free. Exterior Type 1- AS/ NZS4364. Approved for Service Class 3 (exposed exterior applications).
Fire:	Group 3 or Group 1S using intumescent coating system.
Expected dimensional	
change in structure:	Width expansion approx 2%, length expansion approx 0.25%, thickness expansion approx 2.5% (from 7%MC to fibre saturation -variation will occur between boards).

	applying fastene				290, and must be pi 6-		

## 

### **Vulcan Screening**

#### Installation

Where possible screening (especially square profiles) should be orientated so that vertical grain pattern is exposed to the prevailing weather. This can be checked by looking at end section.

Vertical grain oriented towards the weather

Weather-exposed face

Note: The above is an overview only. Installers should refer to specific design information on the construction specification for more detail

- All end grains and notches must be sealed using Abodo's Protector End Seal or equivalent wax sealer, or Sioo:x End Grain Sealer in the case of Sioo:x coated boards. Top exposed end grains of screening must have 15 degree angle applied to shed water. In heavily exposed situations Abodo metal caps should be considered to protect end grains at tops of battens.
- Vulcan Screening should generally be installed minimum 100mm above paved surface or 175mmm above un-paved surfaces. Base of posts must finish minimum 35mm above paved surface and be sealed to prevent moisture ingress.
- Smooth dressed timber must be thoroughly sanded with 120 grit sand paper prior to application of coating. Bandsawn face timber does not require sanding.
- For exterior applications at least one coat of Protector oil or approved proprietary wood stain must be applied to all sides prior to installation and then a further one or two coats applied once boards are fixed in place according to manufacturer's instructions.
- For interior applications timber may be left uncoated or if coated, film forming or high solids coatings e.g. hard wax oil, acrylic or polyurethane must be used only. Coating can be applied to faces only.

#### Maintenance

Wash down every 6-12 months with gentle detergent, warm water and soft brush.

- If possible it is recommended to apply a further coat of oil or stain after approx 12 months of weathering.
- Make a maintenance check every two summers.
- For heavily soiled or mouldy areas use Rejuvenator or similar oxygenating cleaner, active mouldicide and recoat with penetrating oil.
- Re-coat every 2-3 years or as required to maintain colour and integrity of coating. Re-coat period may be longer or shorter depending on climatic conditions and/or positioning of timber to the sun. For Sioo:x coated timber refer to specific maintenance information.

We cannot guarantee against wear or color changes to any products which result from weather, sun, wind and/or the natural aging process of the wood.

Lightening of the timber:

## **(@ ABODO**

### **Vulcan Screening**

\_

#### Maintenance

Surface checking:

Checking (cracks) may be observed on the face and ends of Vulcan timber. Checks are acceptable to install. Checking may become more apparent as the material weathers naturally in place. Fibre pull at laminated glue lines is also possible. These are not defects and are considered a natural part of this wood product. Maintenance with a coating and thorough sealing of end grains with wax sealer will improve long term weathering characteristics.

#### Accessories

## Abodo Stainless Steel Cladding Screw 4.0mm x 45mm or 4.5mm x 65mm:

#### Abodo End Caps:

#### Standard end section sizes (mm):

42x42	88x65	65x65
