

Mixed Length Specification: Indicative Length Supply

Abodo's Vulcan timber is produced from natural wood and therefore has limitations and variability in length supplied. The plantation grown radiata pine logs used as base material are supplied from the forest in a random length specification, generally from 3.0m - 4.8m. Shorter lengths are produced when the timber is cut back during sawmilling. Abodo has little control on what lengths are produced.

This document is designed to give an indication only of what lengths will be delivered when a Mixed Length order is made.

Mixed Length specification allows for supply in lengths from 1.2m - 5.4m either as one **fixed length** or **multiple lengths** at Abodo's option. Up to 5% of an order may include lengths 1.2m - 1.5m at Abodo's option.

Final supply will be determined based on the current stock at hand at time of order.

You may receive a small portion of your order in these lengths

1.2m

1.8m

2.1m

2.4m

2.7m

You are likely to receive the bulk of your order in one or some of these lengths

3.0m

3.6m

3.9m

4.2m

4.5m

4.8m

You are unlikely to receive these lengths

5.1m

5.4m
